Intelligent Monitoring (IM) Report: June 2015

GP IM is an initial list of 33 indicators that currently cover three of our five key questions - Effective, Caring and Responsive. The tool draws on existing and established national data sources (e.g. Quality and Outcomes Framework, GP Patient Survey).

This report presents CQC's view of the IM indicators for Colby Medical Centre Ltd.

The information helps CQC to plan inspection activities and identify areas for further local enquiry. This information is not a judgement on the quality of care provided. CQC's judgement takes the form of ratings which are published after an inspection has been carried out.

We have published a document setting out the definition and full methodology for each indicator, a paper on the statistical methodology and a Frequently Asked Questions document. If, after consulting these documents, you have any further queries or need more information please email enquiries@cqc.org.uk putting the phrase "**GP IM Verification**" in the subject line and quoting in the body of the email your practice's 10 digit registration ID number (this appears at the top right corner of this report).

Key for distribution chart

A 'z-score' (sometimes known as a 'standardised score') tells us how far away a particular practice's score is from the mean average score for that indicator, and measures this in standard deviations. The histogram above represents the z-score distribution for an indicator and will differ from the distribution in observed values. Calculation of a z-score takes account of the sentiment for the indicator so variation is always shown to the right of the thresholds. The vertical y-axis is the count or frequency that a z-score occurs. The horizontal x-axis is the z-score. For a normal distribution, you would expect the peak of the curve to be at a z-score of zero and in the centre of the chart as this represents the mean or expected value. The "large variation for further enquiry" threshold has a z-score value of 2 and the "very large variation for further enquiry" threshold has a z-score value of 3. The purple line displays where the practice falls in the distribution. Identification of large or very large variation for an indicator is not of itself a statement regarding quality and merely identifies possibly unwarranted variation in the data that merits discussion and explanation.

Practice Summary

Count of variations and comparable indicators

Percentage score*	0.0%
Rating from last inspection	Not yet rated
Inspection report publication date	-

*The percentage score gives a guide to the amount of variation shown for the practice by the indicators. It is calculated as follows:

$$\frac{(2 \times \text{number of indicators with very large variation}) + (\text{Number of indicators with large variation})}{2 \times \text{total number of indicators}} \times 100$$

No variations from expected

Domain	ID: Indicator description (time period)	Observed	Average	Numerator	Denominator	Z-score	Z-score range
Effective	GPHLIAC01: The number of Emergency Admissions for 19 Ambulatory Care Sensitive Conditions per 1,000 population. (01/01/14 to 31/12/14)	27.25	14.40	59	2.16	0.77	
	GPHLIAP: Number of antibacterial prescription items prescribed per Specific Therapeutic group Age-sex Related Prescribing Unit (STAR PU). (01/01/14 to 31/12/14)	0.33	0.28	1530	4686	0.93	
	GPHLICH01: The ratio of reported versus expected prevalence for Coronary Heart Disease (CHD) (01/04/13 to 31/03/14)	0.69	0.72	94	135.36	0.22	
	GPHLICPD: The ratio of reported versus expected prevalence for Chronic Obstructive Pulmonary Disease (COPD) (01/04/13 to 31/03/14)	0.96	0.61	93	96.97	-1.48	
	GPHLICQI: Percentage of antibiotic items prescribed that are Cephalosporins or Quinolones (01/01/14 to 31/12/14)	9.0%	5.3%	137	1514	1.74	
	GPHLIEC01: Emergency cancer admissions per 100 patients on disease register. (01/01/14 to 31/12/14)	Value suppressed	7.39	Value suppressed	Value suppressed	-0.51
